RE: SMOKING COMPOSITIONS
— J.I. Seeman PM 703

Dear George:

Dr. Seeman has completed his review of the above-named draft application. Revisions, additions and corrections have been noted throughout the draft, (copy enclosed). In addition, Dr. Seeman has provided on separate enclosure some comments in general about the draft. Points 1-5 of his "comments" are fairly straight forward and should present no problem.

Point 6 will necessitate some comment from you since there is no support in the specification for such a claim. This might best be handled in a future application since I do not believe we can provide the necessary supporting data at this time.

With respect to point 8, Dr. Seeman provided some analytical data which was included in my letter to you dated 19 November 1979. The analytical data was generated in view of French Demande 1583052 which is discussed in the text of the specification. We shall rely on your judgment as to whether it is advisable to include it at this time. Dr. Seeman feels that the data serves to distinguish over the French reference. Point 9 needs no comment.

I have reviewed your correspondence related to this project and am not certain that we have been totally responsive to all of your questions. In any event, please review the enclosed materials; and if you still feel more is needed to complete the application, please give me a call.

Thank you for your assistance. Obviously, from Jeff's comments, he is very pleased with the draft. (See the comment on the abstract page!)

Very truly yours,

Susan A. Hutcheson
